

GitHub Commands

Get existing code from git

- `git clone git@github.com:iaminhri/COSC-4P02.git`

Create a new branch:

- `git branch -c branch_name` // creates a new branch
- `git checkout branch_name` // check out in the specified branch
- `git branch` // shows the branch list

Work on files and push it to git:

- `git add .`
- `git commit -m "write what you did"`
- `git push -u origin branch_name` // push it your branch
- `git pull origin master` // pulls the current repository from github

After working delete the branch:

- `git pull` // pulls all the changes and updates from master branch
- `git branch -D branch_name` // deletes from local computer only.
